MEASUREMENTS OF SPLITS
OF POLITICAL SUBDIVISIONS
OFFICIAL PLAN AND COMMON CAUSE PLAN

DEFINITIONS:

(1) Number of political subdivisions* which are split between all or parts of two or more districts.

* Political subdivision -- for purpose of above discussion, is any county, municipality or ward. (A municipality in Pennsylvania is a city, borough, town, or township.) In addition, certain ward-like units (called "districts" but not to be confused with voting districts) are listed separately as "ward-like units."

(2) Number of times split - measures the number of times a political subdivision is divided between separate districts. Thus, if a political subdivision is divided between two districts, it contains one split; if divided among three districts, it contains two splits; if divided among four districts, three splits, etc.

(3) Number of instances in which districts cross political subdivision lines (not wholly within the political subdivision). Although this is not a measure of political subdivision splitting per se, it may indicate unnecessary splitting, either because a suspiciously large number of political subdivisions have such districts or because individual districts have an excessively large number (generally, two per districts should be sufficient).
