2 A joint resolution of apportionment; providing for the  
3 apportionment of the House of Representatives and the  
4 Senate (plans H000H8013 and S027S8058); adopting the  
5 United States Decennial Census of 2020 for use in such  
6 apportionment; defining terms; providing for the  
7 inclusion of omitted areas; providing contiguity for  
8 areas specified for inclusion in one district which  
9 are noncontiguous; specifying that the apportioned  
10 districts constitute the legislative districts of the  
11 state; specifying that electronic maps serve as the  
12 official maps of the legislative districts of the  
13 state; providing for the public availability of  
14 electronic maps; providing for severability of invalid  
15 portions; providing for application beginning in 2022.  
16

17 Be It Resolved by the Legislature of the State of Florida:  
18

19 Section 1. Official census for apportionment; definitions.—

20 (1) In accordance with Section 8(a), Article X of the State  
21 Constitution, the United States Decennial Census of 2020 is the  
22 official census of the state for the purposes of this joint  
23 resolution.

24 (2) The following delineation of representative and  
25 senatorial districts employs areas included within official  
26 county, tract, block group, and block boundary descriptions used  
27 by the United States Department of Commerce, Bureau of the  
28 Census, in compiling the United States Decennial Census of 2020  
29 in this state. The populations within these census geographic

2022100er

units are the population figures reported in the counts of the United States Decennial Census of 2020 provided to the state in accordance with Pub. L. No. 94-171.

(3) As used in this joint resolution, the term:

(a) "Block" describes the smallest geographic unit for which population was tabulated in the 2020 decennial census. Blocks are nested within tracts and within block groups. A block is identified by a three-character number that is unique within a block group.

(b) "Block equivalency file" describes a list of all blocks within the state and the representative or senatorial district number designated for each block. Blocks are listed by a 15-character number that combines the five-character county-level Federal Information Processing System (FIPS) code, the six-character tract number with leading zeros and an implied decimal, the single-character block group number, and the three-character block number.

(c) "Block group" describes a cluster of blocks within the same census tract. Block groups are nested within tracts, and are uniquely identified by a single character number with a valid range of 0 through 9.

(d) "County" describes a legal governmental subdivision of the state. Boundaries of counties described in this joint resolution reflect those boundaries in effect as of January 1, 2020.

(e) "Geographical information systems map" describes an electronic map that represents the boundaries of representative and senatorial districts in a commonly accepted and readable format.

2022100er

(f) "Tract" describes a relatively permanent statistical subdivision of a county. Tracts are nested within counties, and are uniquely identified by an up to four-character number and a two-digit suffix identified by a decimal.

Section 2. Representative districts.—For the election of members to the House of Representatives of this state, the state is apportioned into 120 consecutively numbered, single-member, representative districts of contiguous territory, to be designated by such numbers as follows:

(1) District 1 is composed of:

(a) That part of Escambia County consisting of:

10983 Section 4. Territory not specified for inclusion in any  
10984 district.—Any portion of the state which is not stated in this  
10985 joint resolution as being included in any district described in  
10986 this joint resolution but which is entirely surrounded by a  
10987 district shall be deemed to be included within the surrounding  
10988 district. Any portion of the state which is not included in any  
10989 district described in this joint resolution and which is not  
10990 entirely surrounded by a district shall be included within that  
10991 district contiguous to the portion that contains the least

population per legislator according to the United States  
Decennial Census of 2020; however, if every district contiguous  
to such portion has an equal population, such portion shall be  
included within the lowest-numbered district that is contiguous  
to such portion.

Section 5. Territory specified for inclusion in one  
district which is noncontiguous.—If any district described in  
this joint resolution is composed of noncontiguous territory,  
the noncontiguous portion that has the least population shall be  
included in the district that is contiguous to such portion and  
that has the least population; however, if every district  
contiguous to such portion has an equal population, such portion  
shall be included within the lowest-numbered district that is  
contiguous to such portion.

Section 6. Districts to constitute representative and  
senatorial districts of state.—The districts created by this  
joint resolution constitute and form the representative and  
senatorial districts of the state, and members of the  
Legislature shall be elected in and for these representative and  
senatorial districts as provided by law.

Section 7. Electronic maps to serve as the official maps of  
representative and senatorial districts; availability.—

(1) Geographical information systems maps and block  
equivalency files representing the boundaries of representative  
and senatorial districts described in this joint resolution  
shall serve as the official maps of the representative and  
senatorial districts of the state. In the event of any conflict  
between the descriptions of districts set forth in this joint  
resolution, geographical information systems maps, or block

2022100er

equivalency files, the descriptions in the block equivalency files shall prevail.

(2) Within 10 days of a judgment of the Florida Supreme Court determining the apportionment provided for in this joint resolution to be valid, the geographical information systems maps and block equivalency files representing the boundaries of the representative and senatorial districts described in this joint resolution shall be made available to the public by the Office of Economic and Demographic Research.

Section 8. Severability.—If any provision of this joint resolution or the application thereof to any person or circumstance is held invalid, or if any representative or senatorial district established in this joint resolution is held invalid, the invalidity does not affect other provisions or applications of this joint resolution, or any other districts established in this joint resolution, which can be given effect without the invalid provision or application, and to this end the provisions of this joint resolution are severable.

Section 9. Applicability.—This joint resolution applies with respect to the qualification, nomination, and election of members of the Legislature in the primary and general elections held in 2022 and thereafter.

## **Software Used to Create Plans**

On February 10, 2021, the Florida House of Representatives and Florida Senate contracted with Environmental Systems Research Institute (Esri), a reputable and experienced national leader in geographic information systems (GIS) products, to supply a web-based application for legislators, staff, and the public to use for map-drawing during the 2022 Redistricting Cycle. Esri possesses a longstanding partnership with the State of Florida, and many state agencies and local governments use its various products. Multiple jurisdictions across the nation use Esri's web-based redistricting application for congressional, state, and local map-drawing, including the Florida Supreme Court during its review in 2012.<sup>1</sup> The software was made available to legislators, staff, and the public on September 22, 2021. Approximately two weeks later, elections data was integrated into the software with limited reporting functionality, and was subsequently updated to include comprehensive reporting capabilities on October 22, 2021.

---

<sup>1</sup> See *In re Senate Joint Resolution of Legislative Apportionment 1176*, 83 So. 3d 597, 613 (Fla. 2012).

As in past cycles, Florida's Redistricting Application was provided to the public for free. To access the application, members of the public could register for a free and secure account to draft, save, revise, analyze, and submit plans. Population characteristics and deviations are updated in real-time as districts are drawn, and statistical reports for mathematical compactness, political and geographic boundary usage, and functional analyses can be run within the application.

Florida has historically used three mathematical measures to judge district compactness, and the application includes functionality to calculate Convex Hull, Polsby-Popper, and Reock scores for proposed districts. Scores are calculated using the NAD 1983 Florida GDL Albers geographic projection (WKID 3086).<sup>2</sup>

---

<sup>2</sup> To calculate areas and distances, spherical coordinates must be transformed ("projected") into a planar coordinate system. Using planar coordinates enables the calculation of areas and distances and the creation of flat maps (which are more user-friendly than 3D globes). However, in making the surface of a sphere flat (projection), compromises (distortions) must be made in terms of shape, area, distance and direction. There are many projections from which to choose based on the landmass of interest and the purpose of the map. The selection of an appropriate map projection is an exercise in how to manage the distortions. Commonly used planar coordinate systems in the Florida are Universal Transverse

The application also includes a Boundary Analysis report to analyze a proposed district's utilization of existing political and geographic boundaries. This report provides the percentage of a district boundary's coincidence with existing political and geographic features. The features in the Boundary Analysis include:

- County Boundaries;
- Municipality Boundaries;
- Primary and Secondary Roadways (interstates, U.S. highways, and state highways);
- Railroads; and
- Significant water bodies with a contiguous area greater than 10 acres.

---

Mercator (UTM) and State Plane. However, the state is in two UTM zones and comprised of three state plane zones. Choosing any one of these would result in the state being tilted (east or west of true north) when presented on a state-wide map. To address this appearance issue, a single projection for the entire state was needed.

The Albers projection is in wide use for mapping mid-latitude landmasses with a predominantly east-west orientation. It is used for many U.S. regional maps. It preserves area well while introducing minimal distortion of shape, distance and direction. The 1990/1992 technical staff of the Florida Senate Committee on Reapportionment specified a Florida-centric Albers projection to solve the appearance issue, and to provide a basis for calculating area and distance. This projection became known as the NAD83/Florida GDL Albers projection (EPSG 3086).

## **Data Used in Drafting Plans and Sources of Data**

The Florida Legislature, and all states, experienced a substantial delay in receiving their redistricting data due to several factors affecting the U.S. Census Bureau's collection and processing of its 2020 Census data, including the COVID-19 pandemic, natural disasters that included hurricanes and wildfires, civil unrest, and legal challenges. The 2020 Census geography was received on February 2, 2021 (expected in December 2020). The 2020 state population counts for apportionment were delivered to the President of the United States on April 26, 2021 (originally due December 31, 2020). The U.S. Census Bureau provided redistricting data as legacy format summary files, which is tabular data, for all states on August 12, 2021 (originally due April 1, 2021). The complete redistricting data toolkit was delivered to all 50 states and the public on September 16, 2021 (originally due April 1, 2021).

Census Data used within the map-drawing application included:

- 2020 Census Redistricting Data (P.L. 94-171) from the U.S.

Census Bureau; specifically<sup>3</sup>:

- Total Population;
- Single-Race Non-Hispanic White Population;
- Non-Hispanic Black Population, including respondents who identified as being Black either singly or in combination with some other race;
- Hispanic Black Population, including respondents who identified as being Black either singly or in combination with some other race;
- Hispanic Population excluding those in the Hispanic Black category;
- Non-Hispanic Population excluding those in Single-Race Non-Hispanic White and Non-Hispanic Black categories;
- All Black Population, including respondents who identified as being Black either singly or in combination with some other race and/or ethnicity, including Hispanic;
- All Hispanic Population who identified as Hispanic and of any race or combination of races, including Black;
- Total Voting Age Population;
- Single-Race Non-Hispanic White Voting Age Population;

---

<sup>3</sup> For redistricting purposes, Florida aggregates multi-racial population according to Section II of OMB Bulletin No. 00-002 – Guidance on Aggregation and Allocation of Data on Race for Use in Civil Rights Monitoring and Enforcement.

- Non-Hispanic Black Voting Age Population, including respondents who identified as being Black either singly or in combination with some other race;
- Hispanic Black Voting Age Population, including respondents who identified as being Black either singly or in combination with some other race;
- Hispanic Voting Age Population excluding those in the Hispanic Black category
- Non-Hispanic Voting Age Population excluding those in Single-Race Non-Hispanic White and Non-Hispanic Black categories;
- All Black Voting Age Population, including respondents who identified as being Black either singly or in combination with some other race and/or ethnicity, including Hispanic;
- All Hispanic Voting Age Population who identified as Hispanic and of any race or combination of races, including Black;
- 2020 Census geography from the U.S. Census Bureau;<sup>4</sup> and
- 2020 Census TIGER/Line<sup>5</sup> geography from the U.S. Census Bureau used for the Boundary Analysis and viewed as reference layers within the map-drawing application:
  - County boundaries (MTFCC<sup>6</sup> = G4020);

---

<sup>4</sup> Census geography is hierarchical, with 390,066 census blocks nested within 13,388 block groups, nested within 5,160 tracts, nested within 67 counties.

<sup>5</sup> “TIGER/Line files” are Topologically Integrated Geographic Encoding and Referencing layers for use with GIS software.

<sup>6</sup> “MTFCC” is a MAF/TIGER Feature Class Code. The Census Bureau’s definition of a county is “the primary division of a state.”

- Municipal boundaries (incorporated places) (MTFCC = G4110);
- RTTYP<sup>7</sup> = I, U, or S (MTFCC = S1100<sup>8</sup> and S1200<sup>9</sup>);

---

The definition of an incorporated place is “a legal entity incorporated under state law to provide general-purpose governmental services to a concentration of population . . . usually is a city, borough, municipality, town, village.” See 2020 TIGER/Line Shapefiles Technical Documentation available at: <https://www.census.gov/programs-surveys/geography/technical-documentation/complete-technical-documentation/tiger-geo-line.2020.html>.

<sup>7</sup> “RTTYP” is an MTFCC field code that describes the type of road. See <https://www.census.gov/library/reference/code-lists/route-type-codes.html>.

<sup>8</sup> “S1100” is the MTFCC code for primary roads. Primary roads are limited-access highways that connect to other roads only at interchanges and not at at-grade intersections. This category includes Interstate highways as well as other highways with limited access (some of which are toll roads). See 2020 TIGER/Line Shapefiles Technical Documentation available at: <https://www.census.gov/programs-surveys/geography/technical-documentation/complete-technical-documentation/tiger-geo-line.2020.html>.

<sup>9</sup> “S1200” is the MTFCC code for secondary roads. Secondary roads are main arteries that are not limited access, usually in the U.S. highway, state highway, or county highway systems. These roads have one or more lanes of traffic in each direction, may or may not be divided, and usually have at-grade intersections with many other roads and driveways. Secondary roads often have both a local name and a route number. See 2020 TIGER/Line Shapefiles Technical Documentation available at: <https://www.census.gov/programs-surveys/geography/technical-documentation/complete-technical-documentation/tiger-geo-line.2020.html>. Note that county roads that are not also secondary roads are not included in the Boundary Analysis.

- Railroads (MFTCC = R1011); and
- Significant water bodies (Area Hydrography features combined to create single-part features, and then selected to include only those greater than 10 acres in area).

The map-drawing application in use included over 350 data points in the following categories to enable users to perform a functional analysis. These data included:

- 2012 – 2020 General Election Voter Registration Information;
  - Total Registration
  - Registration by Party
  - Registration by Race or Ethnicity
  - Registration by Race or Ethnicity and Party

*Included in this chart are the statistics of Registered Voters (RV) and Voter Turnout (VT) for the 2014 general election. For example, the column entitled "DEM RV" indicates the percentage of registered Democrats who are Black and the percentage of registered Democrats who are Hispanic. Conversely, the percentage of Black registered voters who are Democrats, and the percentage of Hispanic registered voters who are Democrat, can be found in the column entitled "Hispanic RV." This set of statistics is provided as part of the functional analysis for this plan's performing minority districts. All statistics denoted are percentages.*
