CENSUS 2020

- Every ten years, the country conducts a census to count every person in the United States.
- The next count will take place **April 1, 2020**.
- Census counts used to reapportion the U.S. House of Representatives, determining how many seats each state gets.
- Census counts also used to determine the number of electoral college votes a state gets.
- Census counts used by state officials to redraw congressional and state legislative boundaries to account for population shifts.
- The distribution of more than \$675 billion in federal funds, grants, and support to states, counties, and communities are based on census data. These funds support schools, hospitals, roads, public works, and other vital programs.
- An undercount of the Texas population of just 1% could translate to a loss of \$300 million per year in federal funding for the state.
